

WHO representative Bangladesh
World Health organization
Dhaka - 1212 Bangladesh

Dear A. Jamsheed Mohamed,

We are a nonprofit organization working on climate justice and safe usages of artificial intelligence Ai , I am writing to emphasize the growing public health risks associated with technological air pollution and to advocate for a more integration of Artificial Intelligence (AI) technology in Bangladesh addressing this global challenge.

We are following your organization's guideline of air pollution evidence based data with help of other technological collaboration diverse sources, including satellite imagery, ground sensors, and meteorological information to provide real-time, highly accurate air quality assessments and forecasts.. This allows for early warning systems and proactive public health interventions with collaboration IQ air Switzerland to confirm information and complaints with local government at the country level with associate ministry of environment and as well as international organization. Identifying hidden air pollution sources and patterns with machine learning algorithms can detect subtle patterns and correlations in complex datasets, helping to pinpoint specific sources of pollution, even "hidden" pollutants, and understand their impact on different communities. This data can inform targeted regulatory and mitigation strategies with automated sensor command for air pollution. Even though the hidden air pollution or invisible air pollution with technological command affects child health, in a point of view kids are forced to stop going to school. And community based pathogen adaptation for pollution transforming public health risk.

Providing your organization core function, WHO support at the country level leadership and developing ethical guidelines for evaluation of effective air pollution control strategies in environmental health issues, Joint action needed. We can make an effort toward cleaner air and healthier populations globally.

Thank you for your time and consideration of this critical public health matter. Let us know how we can make an effort to solve an issue.

Sincerely,

Shakwat Sadi
